

PRESS RELEASE

With Indigo, cities are switching to connected parking

Indigo displays the future of connected parking at Expo Real from 4-6 October in Munich in Hall C1, Stand C1.410 / Presentation of the current eMobility Project in Leipzig

Berlin, 27 September 2017 – The worries of finding a parking space are over – connected parking leads the way into the future. At Stand C1.410 at the Expo Real trade fair in Munich, Indigo, the world leader for parking procurement and management, shows how drivers can reach their destination faster with the new parking and individual mobility solutions and benefit from additional services. The current example, presented exclusively at Expo Real, is the eMobility pilot project in the city of Leipzig, where the state-of-the-art Indigo car park has added innovative electric vehicle charging stations and the related infrastructure for eCars.

From apps for booking parking spaces in advance using cashless payment and additional services like car sharing or e-bike rental to free information on shopping opportunities and on-site events, Indigo has a green light to make parking a user-friendly experience. Parking is child's play with innovative technologies that revitalize communities and the retail sector by connecting car parks with local shops and facilities, turning the former into hubs for urban mobility.

At Expo Real, Indigo is showcasing the latest technologies and presenting many practical examples, such as the current eMobility project in Leipzig and the opening of Germany's highest-altitude car park in Feldberg with innovative mobility solutions for hikers and skiers. Trade fair visitors can watch video presentations to learn about the latest connected parking innovations and discuss their specific requirements with specialists at the Indigo stand.

"More and more cities, communities and companies recognize that connected parking is becoming a key success factor. In the future, maximum inner-city mobility combined with individual user comfort will determine which parking place drivers choose and where," say Gérard Jeitz, CEO of Indigo Park Deutschland GmbH.

As a market leader for parking procurement and management, Indigo plans, designs, finances and operates 2.2 million parking places, 5300 car parks and over 3000 km of on-street parking in over 750 cities in 16 countries worldwide. In Germany, Indigo has more than 14,000 parking spaces in 36 buildings and 16 cities, and uses innovative solutions to provide customers with added value for parking and road traffic.

About Indigo

Indigo, headquartered in France, is the world leader for parking and individual mobility. Indigo employs 19,000 people and is present in 16 countries and over 750 cities. It is the only parking and mobility service operator present on three continents and in all parking segments: on-street, off-street and shared private car parks. Indigo operates more than 5300 car parks throughout the world, with over 2.2 million parking spaces and over 3000 km of on-street parking. Indigo assists local authorities and private sectors (healthcare facilities, shopping malls, train stations, airports, etc.) and develops tailor-made parking and mobility solutions for users while making the city more pleasant and enhancing traffic flow. In a booming mobility market estimated to reach €100 bn by 2025, Indigo is a key player as far as the mobility of the future is concerned. www.parkindigo.com
